

# THE CYGNA AUDITOR® PLATFORM

A comprehensive, integrated system that monitors and protects the data in your Microsoft infrastructure no matter how large or small.

## Unprecedented Insight. Zero Impact. One Scalable Platform.

### Unified Platform

Unlike other solutions, the Cygna Auditor platform was designed from the start to have all product modules integrated into one package. As a result, they work seamlessly together.

### Ransomware and rogue administrator protection

Cygna Auditor detects and alerts on unusual, mass file updates, such as a ransomware virus encrypting every file on a file server or a rogue administrator deleting folders.

### Zero Impact Monitoring

Cygna Auditor is designed to be easy to install, with a minimum server footprint. It requires no agents, thus minimizing complexity and keeping the attack surface on your monitored servers to a minimum.

## Quickly Find What You Need

### Zero Impact Monitoring

Cygna Auditor is designed to be easy to install, with a minimum server footprint. It requires no agents, thus minimizing complexity and keeping the attack surface on your monitored servers to a minimum.

### WHO, WHAT, WHEN & WHERE Auditing

Cygna Auditor allows you to answer the audit questions of who, what, when, and where for all the places you can store data in the Microsoft ecosystem: file server, database, directory, or cloud.

### See All Changes

Cygna Auditor for Active Directory allows you to see all the changes made to this critical service, and to be able to roll back these changes to undo any accidental or malicious actions.

## Turn Compliance Worries Into Checkboxes

### GDPR Compliance

In 2018, any organization that holds data of EU citizens must meet the new General Data Protection Regulation (GDPR) standard. Cygna Auditor will help you support this standard with deep visibility into your environment.

### Satisfy Customers

Even if your organization isn't in a regulated industry, your customers may look for you to meet standards. Cygna Auditor can quickly produce audit reports to satisfy these compliance requests.

### Satisfy Regulatory Standards

To satisfy regulatory standards, you must have visibility into everything your monitored system can do. Cygna Auditor can collect every event the most common regulatory standards require.

# Why Cygna Auditor?

## No OS modifications needed

Unlike other auditing solutions, Cygna Auditor does not depend on operating system modifications to acquire the data it needs.

## Up and running in minutes

Up and running in minutes. Cygna Auditor installs quickly and easily to start delivering insight right away. And its clear and straightforward web interface makes it easy to get overviews of each module or drill down into a particular module.

## Optimized audit database

Optimized audit database. Cygna Auditor's database is specifically tuned for audit data, so queries and reports – no matter how large – take no time at all. To appreciate what Cygna Auditor can do for your organization, you need to see it in action! Contact us to request a Cygna Auditor demo tailored to your needs or to learn more about how affordable data insight and control can be.

# Deployment Options

## On-Premise

Cygna Auditor can easily be installed on Microsoft Windows server in your data center.

## Cloud

Cygna Auditor is supported on Azure and AWS cloud services.

## Virtual

Cygna Auditor is also available as a Hyper-V or VMware virtual appliance for rapid deployment.

# Industries Have Specialized Needs

## Healthcare Industry

Healthcare organizations have been hit especially hard by ransomware because lives may depend upon availability of their IT systems and data. Cygna Auditor can alert healthcare admins of ransomware attack to limit the damage they cause.

## Financial Services Industry

Systems in financial service companies require very high availability, but unplanned configuration changes can cause outages that affects availability and service level agreements. Use Cygna Auditor to detect and alert on changes to a baseline configuration.

## Government Entities

Public sector organizations are facing ever-increasing demands and expectations from their constituents to deliver services more effectively, efficiently and securely. Cygna Auditor monitors at-risk systems and alerts the administrator of unusual activities and behavior that may indicate a threat.
